- 1 Comments: There are other ways to immobilize nuclear waste, such as in ceramic pellets. It may be more costly but the long term savings and benefits are far greater.
- 2 I used to live in the state of Washington. I grew up there. much of that time was within range of Hanford. I have health problems that shouldn't exist because my heritage is a long life with good health. Who pays for this? I do. I also don't get the quality of life that I might otherwise have had because my ability to work has been diminished. I'm 56 and it's late for me, but not for future generations. Please don't do this! There are so many other options. Is this going to be ongoing? Then stop it! We voted against WPPS and they built it anyway! We, the people, don't really seem to be able to do much. We might as well be in Russia! What does it take, another Chernoble? Can't you people get it through your heads that this is nothing to toy with? We are getting worried about global warming. HMMMMMMMM? Maybe the President ought to be checking out t
